Jnit	11-12: DOM and Events	4
	Objectives	4
	Specification:	4
	Damuer	,

CODE: JS-E.M.A1202 (Quiz App)

TYPE: Medium LOC: 300

DURATION: 180 minutes

Unit 11-12: DOM and Events

Objectives

- Understand DOM and how to use DOM Events to interact with web page
- Understand Model-driven concept with working with DOM

Specification:

You have to design an Online Quiz using OOP style. The app consists of 3 mains parts (see below figure)

- 1. The title: JavaScript Online Quiz
- 2. The Question Container which contains the Question and a list of choice. User can only choose 1 answer from the list.
- 3. Button Group: Previous Question, Next Question, Submit

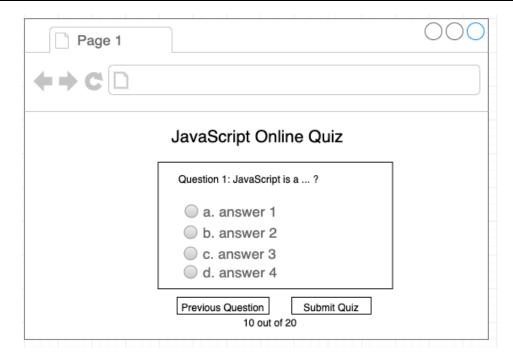

Suppose we have 20 Questions in total.

If the current question is 1 (count from 1 to 20), only **Next Question** button is shown. Click on this button will show next question (in this case question number 2).

If current question is from 2 to 20, then **Previous Question** must be show. Click on that button will show previous question.

If you are at last question (Question number 20), you must show **Submit Quiz** button, and hide Next Question (there is no more next question). If user click on this button, you must show his/her total score below the Button Group

Find below the list of questions represented in JavaScript:

```
1. const myQuestions = [
2.
3.
          question: 'Javascript is _____ language.',
          answers: {
4.
            a: 'Programming',b: 'Application',
5.
6.
            c: 'None of These',
7.
            d: 'Scripting'
8.
9.
          },
10.
          multi: false,
          correctAnswer: 'd'
11.
12.
13.
14.
          question:
            'Which of the following is a valid type of function javascript supports?',
15.
16.
          answers: {
17.
            a: 'named function',
18.
            b: 'anonymous function',
            c: 'both of the above',
19.
            d: 'none of the above'
20.
21.
22.
          multi: false,
23.
          correctAnswer: 'c'
24.
25.
26.
          question:
            'Which built-in method returns the index within the calling String object of the
    first occurrence of the specified value?',
28.
          answers: {
            a: 'getIndex()',
b: 'location()',
29.
30.
            c: 'indexOf()',
31.
            d: 'getLocation()'
32.
33.
          },
34.
          multi: false,
          correctAnswer: 'c'
35.
36.
37.
38.
          question: 'Which one of the following is valid data type of JavaScript',
39.
          answers: {
            a: 'number',
```

```
41. b: 'void',
42. c: 'boolean',
43. d: 'nothing'
44. },
45. multi: false,
46. correctAnswer: 'c'
47. }
48. ];
```

Bonus:

Extend the functionality of the app to support Question with Multi Choice without breaking the current flow.
